

**TS - 1500****Tray Stacking System****TS-1500 Automated Tray Stacking System**

BP Microsystems' Automated Tray Stacking System automatically loads and unloads JEDEC trays for BP Microsystems' 3000 and 4000 Series Automated Programming Systems. Equipped with the capability of transferring up to 24 trays of IC devices before reloading, the TS-1500 can significantly reduce operator intervention and provide a continuous programming operation. Mistakes of passing blank part trays are avoided by the unit's separate input and output tray stacks. The BP Microsystems' TS-1500 Automated Tray Stacking System reduces your labor costs for programming IC devices.

- **“On-The-Fly” loading and unloading of trays for true non-stop operation.**
- **Fits all existing BP Microsystems' 3000 and 4000 Series Automated Programming Systems.**
- **Holds up to 24 thin or 15 thick JEDEC Trays. Handles many non-JEDEC Trays.**
- **Insert and remove trays with packing straps attached. (A BP Microsystems Exclusive)**
- **Separate input and output tray stacks.**
