

- Launch a device request from BPWin
- Search and request from one location
- Quick and simple device request method
- For more information, see the BPWin Help section

BPWin Now Offers Web Link to Device Request Form

Request Support For A Device From BPWin

Not seeing your device in BPWin? Now you have the ability to request support for a device directly from the software by clicking on the *Request a device* link in the Device Selector dialog.

How It Works

By simply clicking on the *Request a device* link in the BPWin Device Selector dialog, you will be directed to the device support request form located on BPM Microsystems' website. Here you will fill in your contact information and your desired device support information. After clicking on the *Submit Device Request* button, the form will be sent to a BPM Microsystems' representative who will contact you with a confirmation of receipt and a web request number for tracking.

What This Means To You

BPM Microsystems has made it easy for you to search and request support for your device from one location. Just download the latest version of BPWin and access the device support request form right from the Device Selector dialog. Your request will be sent instantly to a BPM Microsystems' representative, saving you valuable time.
